Scientific Method

The Scientific Method is the cyclical process where hypotheses are tested by experiments to build consensus models.

	Model		Experiment		Hypothesis	
	Macro	Micro	In Vitro	In Vivo	Theory	Theorem
Physics	Relativity	Standard Model	LHC	JWST	String Theory	QED
Chemistry	Conservation	Periodicity	Nuclear Power	3 nm process	Statistical Thermodynamics	Quantum Mechanics
Biology	Evolution	Genetics	CRISPR gene editing	mRNA Vaccines	Abiogenesis	Modern Synthesis
Neuro Science	Emergence	Correspondence	Neural Implants	General Anaesthesia	Brain Mapping	H.H. Model
Psychology	Conformity	Personality	Music	1.5 billion English speakers	Actualization	The unconscious
Sociology	Law	Agency	Woman at Point Zero	Civil Law	Utilitarianism	Conflict Theory
Economics	Currency	Supply and Demand	Credit cards	Euro Zone	Laissez Faire	Invisible Hand

Nervous System

Synapse

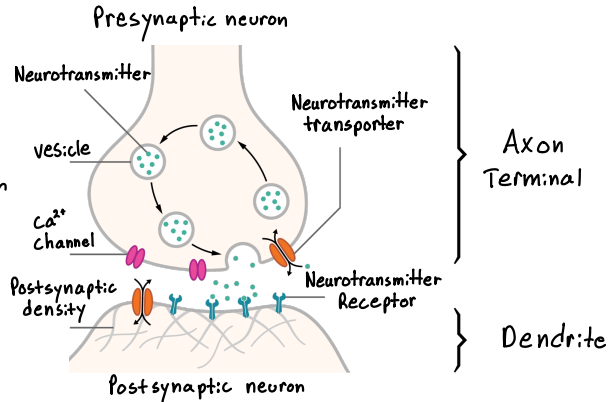

Synaptic plasticity:

- Malleability of synaptic potential
- Hebbian Theory

Postsynaptic neurons grow wire to the presynaptic neurons which caused them to fire

Four Key Neurotransmitters

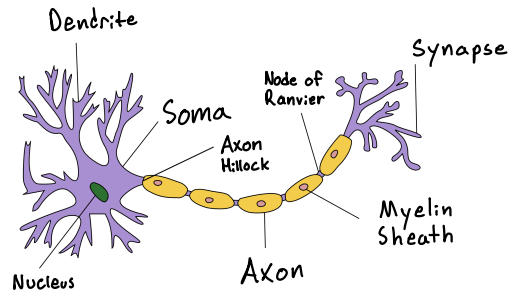

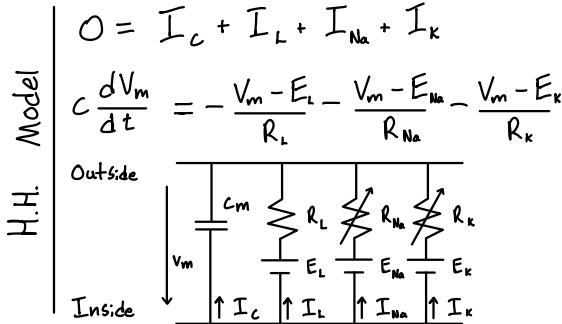

- Dopamine - Reward
- Oxytocin - Belonging
- Glutamate - Everything
- Serotonin - Spirit

Neuron

- Brain cell, Nerve cell

~7,000 synapses / neuron

Brain

- Cerebral Cortex

- Outer layer of cerebrum, more folds → more area

Frontal lobe - "Will" - Executive choice

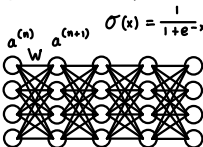

Parietal lobe - "Walls" - Spatial mapping

Temporal lobe - "Time" - Temporal sequencing

Occipital lobe - "Eyes" - Immediate sight

- Neural network

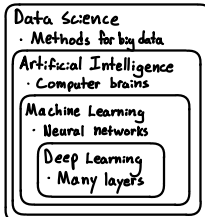

$$a^{(n+1)} = \sigma(Wa^{(n)} + b)$$

W : Weight Matrix

$a^{(n)}$: Activation Vector n

b : Bias Vector

Cerebrum - One Hundred Billion Neurons in the Brain

Parietal Lobe

Occipital Lobe
